

Implement Client Script & UI Policy (Incident)

Milestone 5: Create onCellEdit Client Script

Activity 1: Create Client Script

Description

1. **Navigate to Client Scripts:**

Go to System UI → Client Scripts in your ServiceNow instance.

2. **Click New** to create a new Client Script.

3. **Fill in the details:**

- **Name:** Prevent state change via list edit – clearly indicates that the script prevents users from changing the State field directly in a list.
- **Table:** Incident – applies the script only to Incident records.
- **Type:** onCellEdit – runs whenever a field is edited directly in a list view.
- **Field name:** State – the script will monitor changes to the State field.
- **Active:** true – ensures the script is enforced immediately.

4. **Paste the script** into the script editor section. The script should prevent unauthorized changes to the State field when editing from the list view.

5. **Click Submit** to save the Client Script.

6. **Verify:** Open an Incident list and try to change the State field directly in the list. The script should block the change as intended.

7. Click **Submit**.

Messages

```
function onCellEdit(sysIDs, table, oldValues, newValue, callback) {
    alert('State cannot be updated using list editing. Please open the Incident.');
```
