

2. Requirement Analysis & Scope

Topic: Implement Client Script & UI Policy (Incident)

1. Task 1 & Task 2: UI Policy Specifications

Policy Component	Configuration Setting	Details / Behavior
UI Policy Name	High Impact Control	Applies controls when Incident has High Impact
Target Table	Incident (incident)	Applies only to Incident form
Active State	true	Policy active on form load and change
Condition	Impact is 1 " High	Triggers when Impact field value = 1
Reverse if false	true	Reverts field behavior when Impact is not High
Action 1 (Assignment Group)	Mandatory = true	Assignment Group becomes mandatory on High Impact
Action 2 (Urgency)	Read-only = true	Urgency field becomes read-only on High Impact

2. Task 3, 4 & 5: Client Scripts Specifications

Script Name	Type	Trigger / Field	Script Purpose & Behavior
Auto set urgency for high impact	onChange	Impact	Sets Urgency = 1 (High) and adds info message when Impact = 1.

Prevent save if Assigned To missing	onSubmit	Form Submission	Blocks save and shows error if Impact = 1 and Assigned To is empty.
Prevent state change via list edit	onCellEdit	State	Blocks list editing on State field and alerts user to open form.
