

3. Project Design Phase

Client-Side Control & Validation Architecture

1. UI Policy & Client Script Workflow

[User Opens/Edits Incident Form]

```

    â”,
    â”â”€â”€â”€â”€> [Impact Changed to 1 - High]
    â”,          â”â”€â”€â”€â”€â”€> Trigger UI Policy "High Impact Control"
    â”,          â”,          â”â”€â”€â”€â”€â”€> Make Assignment Group MANDATORY
    â”,          â”,          â””â”€â”€â”€â”€â”€> Make Urgency READ-ONLY
    â”,          â”,
    â”,          â””â”€â”€â”€â”€â”€â”€> Trigger onChange Script "Auto set urgency for
high impact"
    â”,          â”â”€â”€â”€â”€â”€â”€> Set g_form.setValue('urgency', '1')
    â”,          â””â”€â”€â”€â”€â”€â”€> Show Info Message
    â”,
    â”â”€â”€â”€â”€â”€â”€â”€> [User Clicks Submit / Save]
    â”,          â””â”€â”€â”€â”€â”€â”€â”€> Trigger onSubmit Script "Prevent save if Assigned
To missing"
    â”,          â”â”€â”€â”€â”€â”€â”€â”€> Check: Impact == '1' AND Assigned To ==
''?
    â”,          â”â”€â”€â”€â”€â”€â”€â”€> IF TRUE: Show Error Box & Return FALSE
(Block Save)
    â”,          â””â”€â”€â”€â”€â”€â”€â”€> IF FALSE: Allow Save (Return TRUE)
    â”,
    â””â”€â”€â”€â”€â”€â”€â”€â”€â”€> [User Edits State via List View]
    â””â”€â”€â”€â”€â”€â”€â”€â”€â”€> Trigger onCellEdit Script "Prevent state change via
list edit"
    â”â”€â”€â”€â”€â”€â”€â”€â”€â”€> Show Alert: "State cannot be updated
using list editing."
    â””â”€â”€â”€â”€â”€â”€â”€â”€â”€> Execute Callback(false) -> Block List
Change

```
